

“Lab Session”

Problem Statement:

In College fest, Students want to take registrations for a Debate event and want to keep track of student details based on the department. Help the students to create a table with the help of Spring, MVC, Hibernate ORM to perform CRUD operations on the table.

Sample Table:

| Student Id | Name | Department | Country |
|------------|--------|------------|-------------|
| 1 | Suresh | B.Tech | India |
| 2 | Muri | B.Arch | Canada |
| 3 | Daniel | B.Tech | New Zealand |
| 4 | Tanya | B.Com | USA |

Create a Dynamic web project and make sure that the following operations can be performed.

1. Insert new records into the table.
2. Update existing records into the table.
3. Delete existing records from the table.
4. Print all records from the table.
